

tonerplastics

Founded in 1989, Toner Plastics is a plastics manufacturing technology company specializing in profile extrusion, injection mold design and manufacturing, and injection molding. With an uncompromising commitment to quality and service, we provide solutions that meet our clients' needs while exceeding expectations.

MEDICAL

Our medical molding facility is ISO 9001 registered and has clean room capability. We work closely with medical market customers to validate new tools in our manufacturing process and welcome customer quality audits. Whether you need medical-grade, biocompatible, or just durable plastic material, Toner Plastics has the ability to meet your requirements.

INDUSTRIAL

Toner Plastics manufactures products for several markets that we collectively refer to as "general industrial". We make water pipes for agricultural applications, drains for commercial buildings, chafe strips for pool liners, protectors for industrial bandsaw blades, and many other unique plastic products.

3D PRINTING

Toner Plastics is a leading North American manufacturer of 3D printing filament. Wholesalers and resellers can receive product more quickly and without tariffs with our USA-made filaments. Inventory carrying costs, minimum order quantities, and lead time are minimized, which is essential for a growing business with uncertain demand.

WIRE & CABLE

We provide a broad range of components for wire and cable applications, most notably datacom and fiber optic applications. Our extrusion facility has access to high quality custom and application-specific polymer compounds which allows us to manufacture long-lasting components that meet your specific requirements.

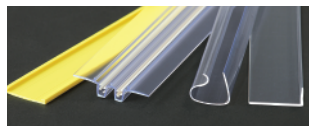

CRAFTS

We have over 10,000 SKUs of beads, plastic lace, rubber bands and bracelet making accessories. Our products can be found in major retailers such as Walmart, Michaels, Jo-Ann, Hobby Lobby, and more.

Whether you are an inventor, entrepreneur, or major retailer, we want to hear your product ideas. We have a broad range of capabilities to bring your ideas to life.

P.O.P.

Toner Plastics is a premier provider of custom molded and extruded products for the point of purchase display industry. From co-extruded shelf edges to customized display extrusions, our experience and capabilities allow us to provide short lead times and cost-effective solutions without compromising quality.

OUR ENVIRONMENTAL RESPONSIBILITY

At Toner Plastics, we take pride in our environmental and social sustainability practices. When it comes to protecting our environment, we believe that properly managed manufacturing plays an important role.

From powering almost 200 homes with our solar panels, using energy-saving equipment, manufacturing biodegradable materials, and enforcing strict recycling programs, we are dedicated to environmentally-friendly practices that ensure the preservation of our planet. We go further than the standard regulations and only work with companies that abide by environmental laws.
